

## TEAM 5:

Alvarez Michelle

Correa Kerly

Eivar Jaime

Garcia Mayerly

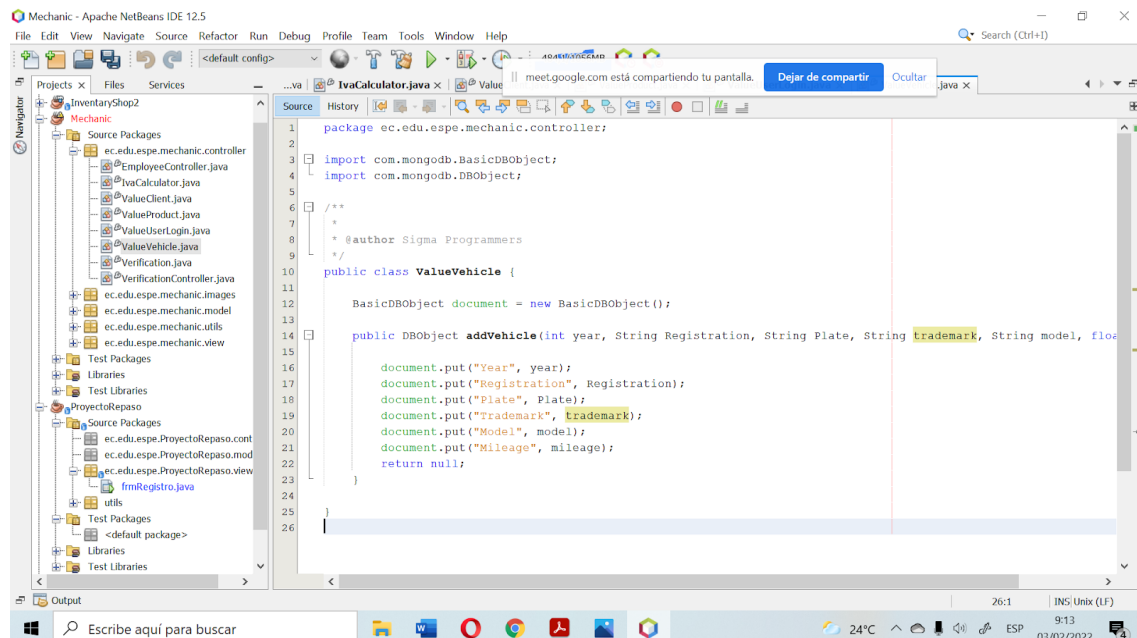

Teca Camila

Teran Melanie

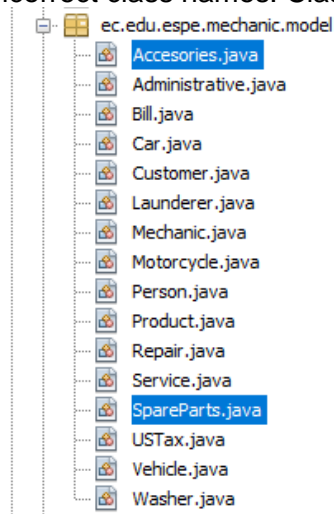

```
1 package ec.edu.espe.mechanic.controller;
2
3 import com.mongodb.BasicDBObject;
4 import com.mongodb.DBObject;
5
6 /**
7  *
8  * @author Sigma Programmers
9  */
10 public class EmployeeController {
11
12     BasicDBObject document = new BasicDBObject();
13
14     public DBObject addVehicle(int Name, String LastName, String Phone, String Code) {
15
16         document.put("Name", Name);
17         document.put("LastName", LastName);
18         document.put("Phone", Phone);
19         document.put("Code", Code);
20
21         return null;
22     }
23
24 }
```

The name is declared as a int, it should be String - Bad quality code

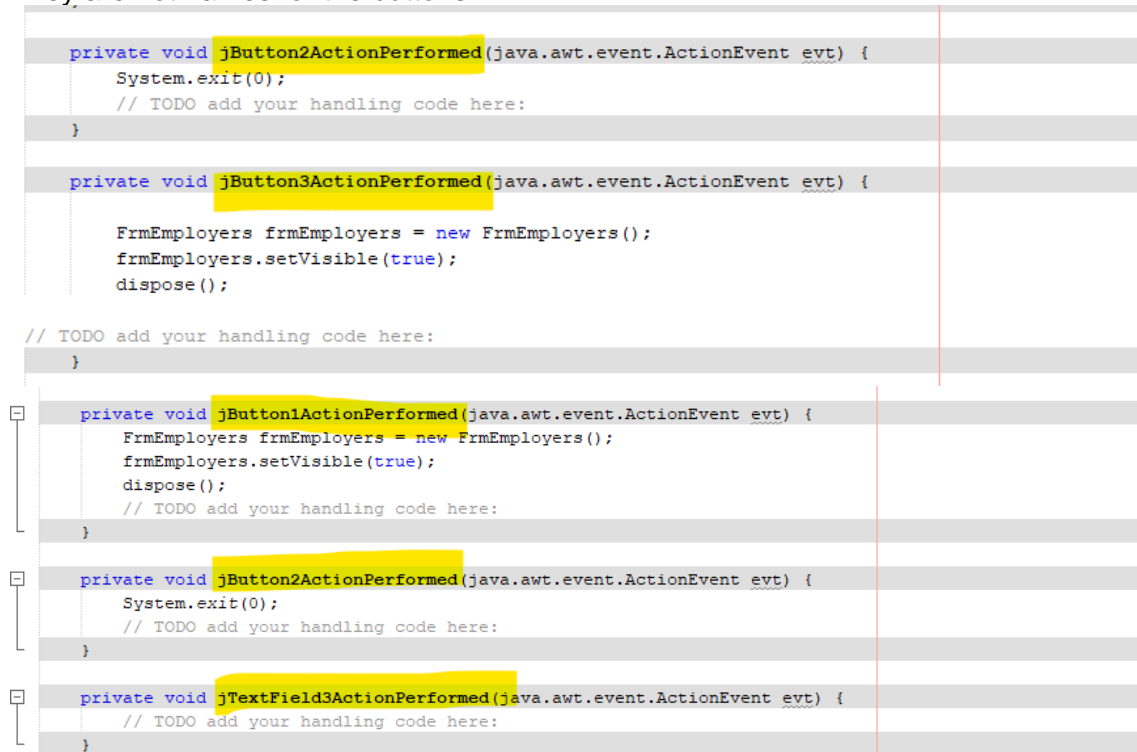

```
1 package ec.edu.espe.mechanic.controller;
2
3 import com.mongodb.BasicDBObject;
4 import com.mongodb.DBObject;
5
6 /**
7  *
8  * @author Sigma Programmers
9  */
10 public class ValueProduct {
11
12     BasicDBObject document = new BasicDBObject();
13
14     public DBObject addProduct(String name, int quantity, int price) {
15
16         document.put("Name", name);
17         document.put("Quantity", quantity);
18         document.put("Price", price);
19         return null;
20     }
21 }
```

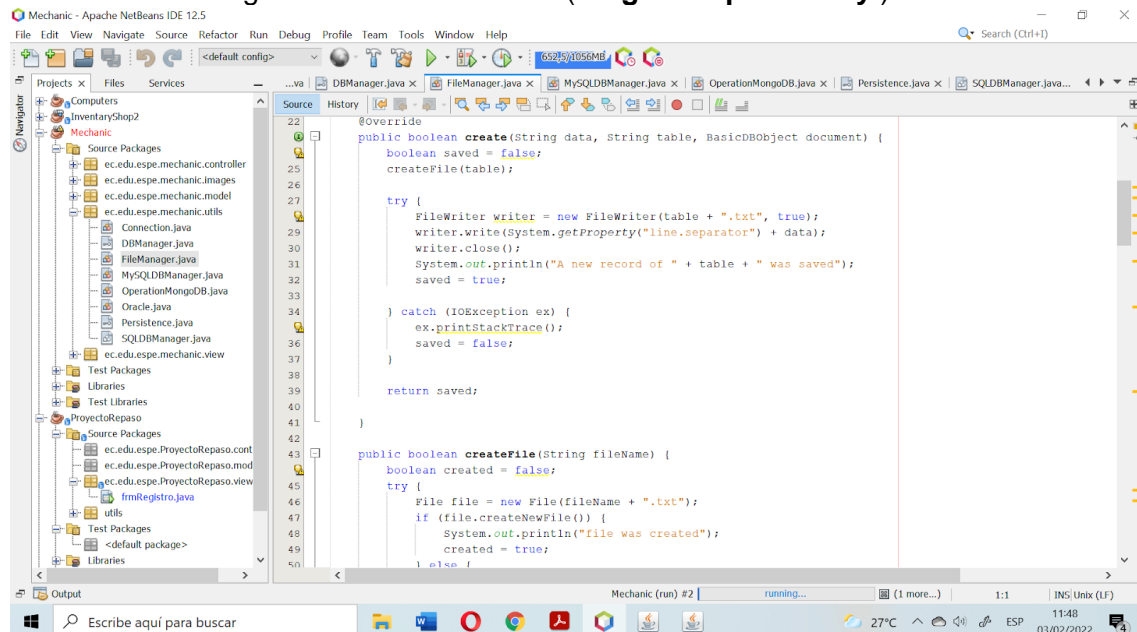

Incorrect class names. Classes are written in the singular:

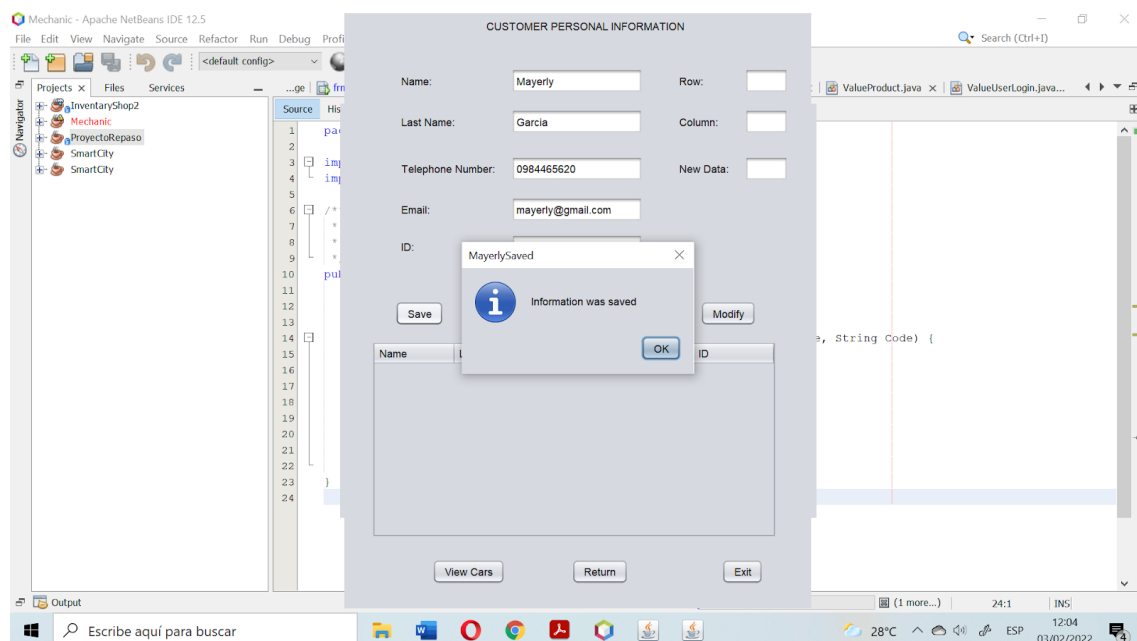

They are not names for the buttons:

In the utils package there should be one class to the database, but no more than two classes connecting to the same database. (**Single Responsibility**)

The **Interface segregation principle** is broken because the clients of the program should know what data is entered and which methods should actually be used. Added or saved data is not displayed in the table

**Single Responsibility Principle** broken because has not relation with the data of the class:

Employee Registration

Name

Last Name

Phone

Code

Row

Column

fact

Name	Last Name	Phone	code

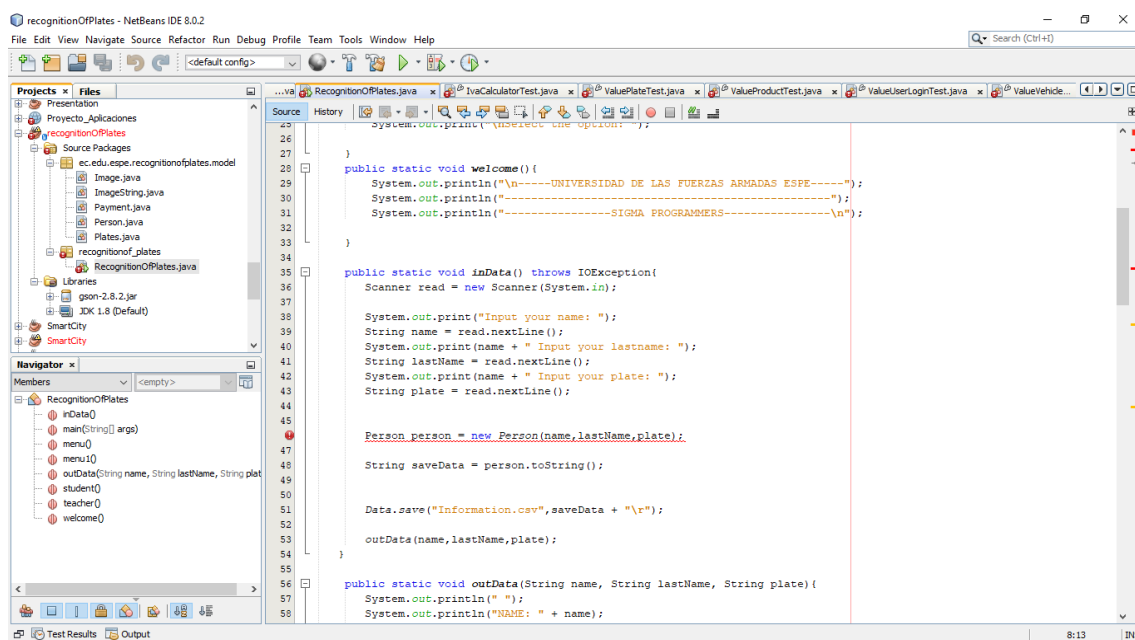

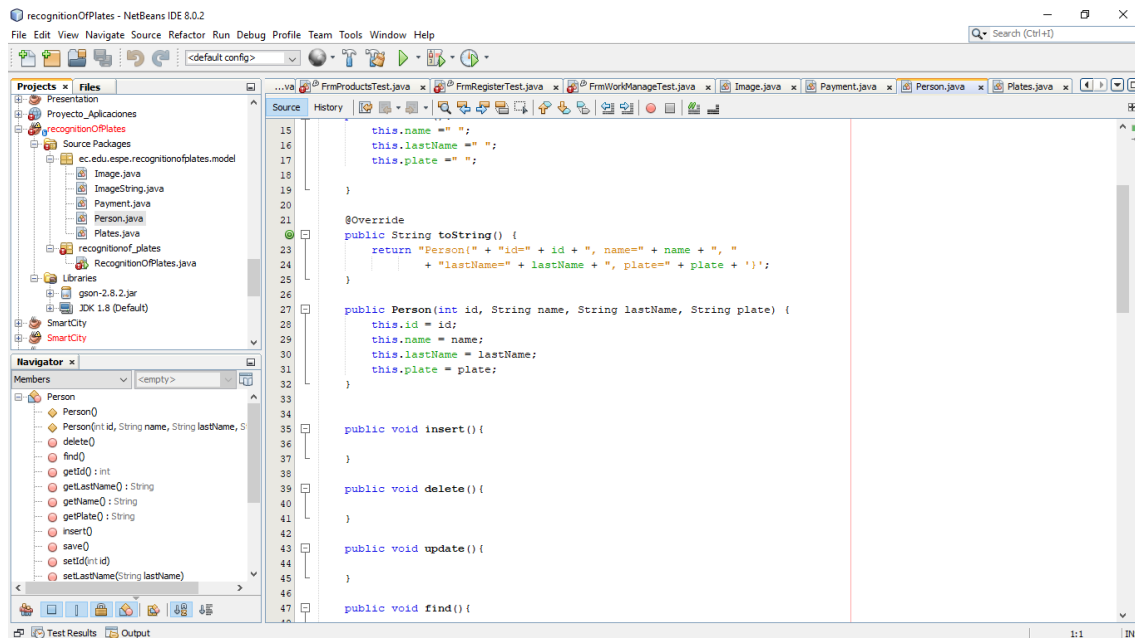

**Single Responsibility Principle** broken because the "add vehicle" object is not related to the "EmployeeController" class.

```

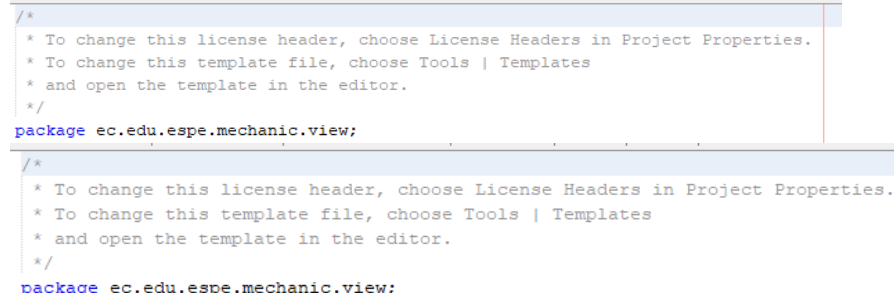

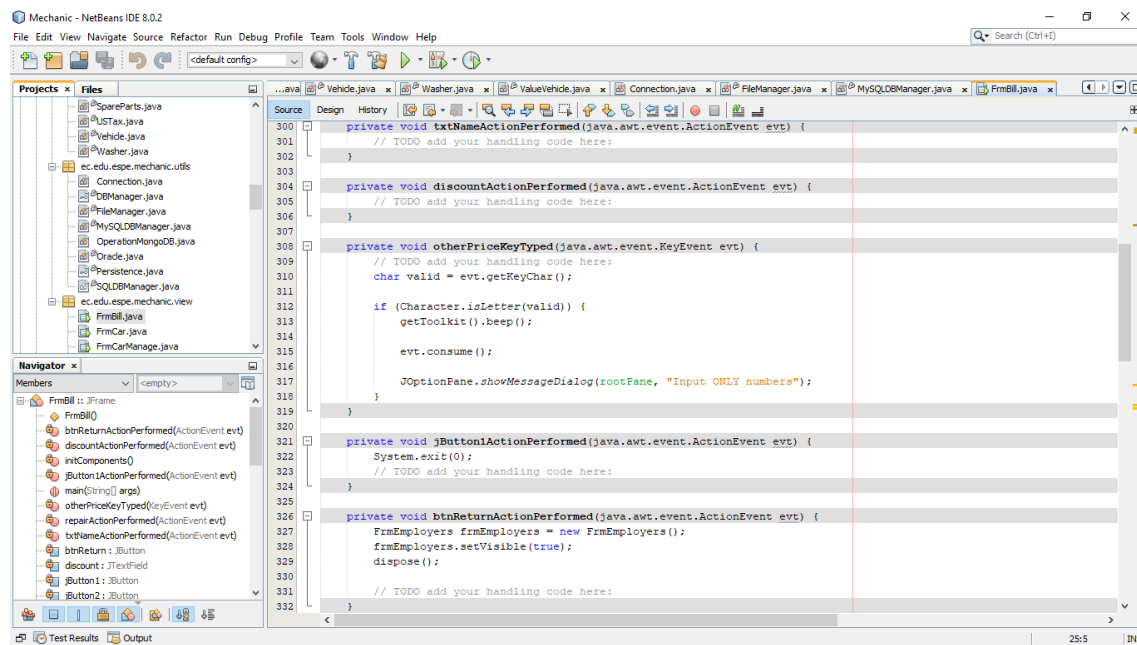

1 package ec.edu.espe.mechanic.controller;
2
3 import com.mongodb.BasicDBObject;
4 import com.mongodb.DBObject;
5
6 /**
7  *
8  * @author Sigma Programmers
9  */
10 public class EmployeeController {
11
12     BasicDBObject document = new BasicDBObject();
13
14     public DBObject addVehicle(int Name, String LastName, String Phone, String Code) {
15
16         document.put("Name", Name);
17         document.put("LastName", LastName);
18         document.put("Phone", Phone);
19         document.put("Code", Code);
20
21         return null;
22     }
23 }

```

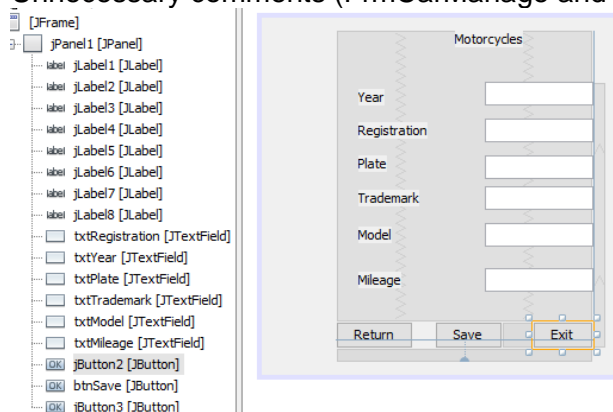

Bad declaration of the person Method of the Person class, missing to declare id

Bad names for button functions, FrmBill does not perform any function and comments not deleted

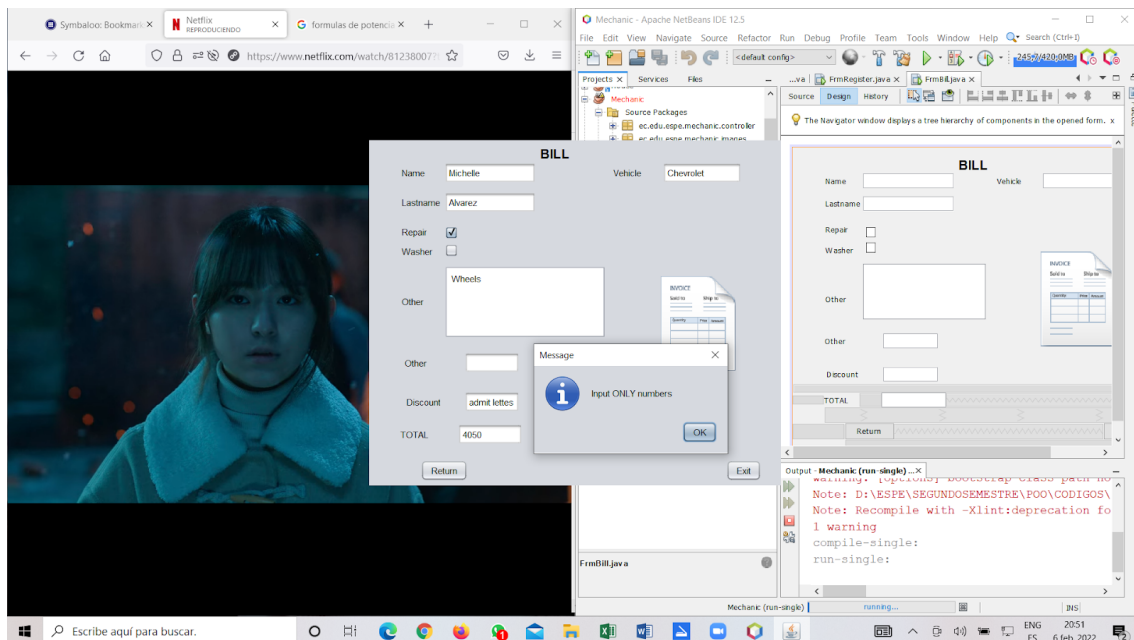

## Unnecessary comments (FrmCarManage and FrmWorkManage )

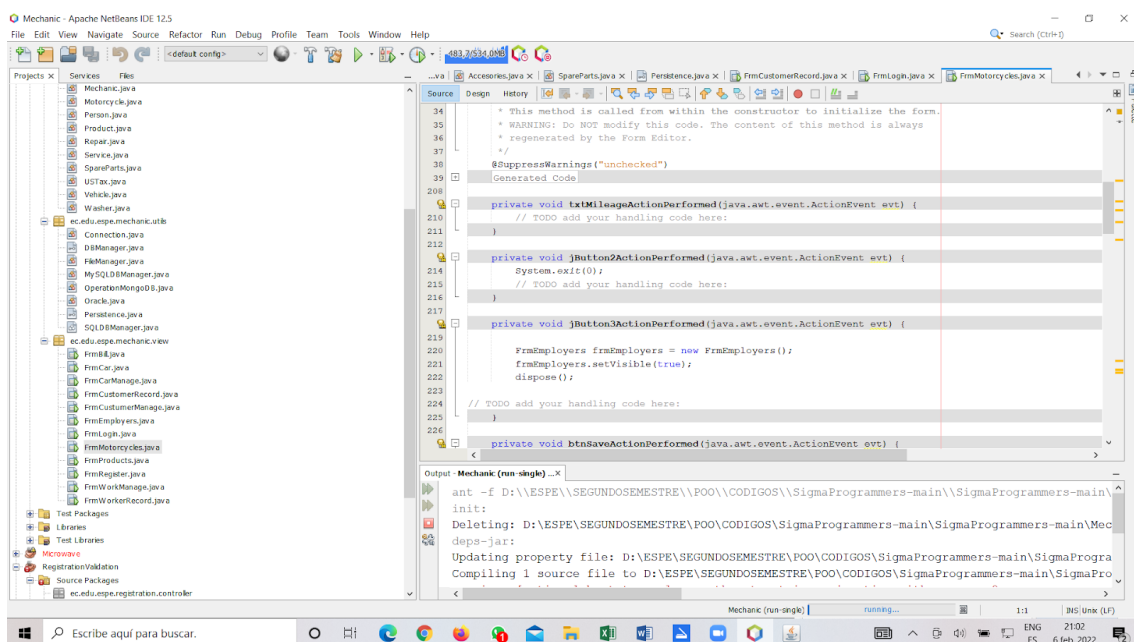

## Bad names for Return and Exit buttons (FrmMotorcycles)

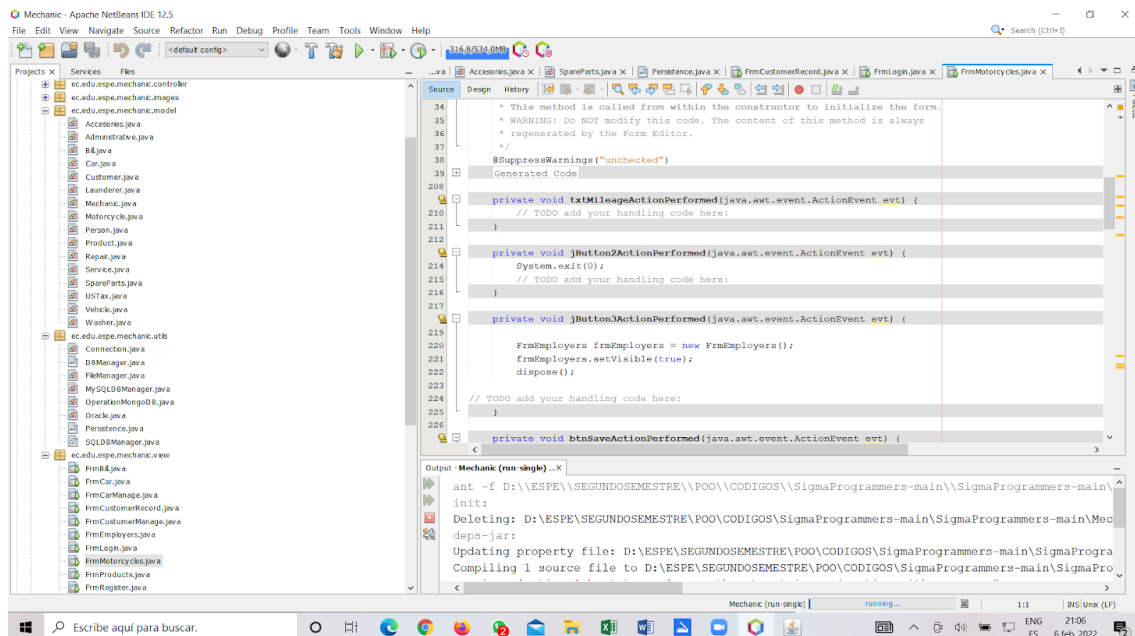

## Table name in spanish (FrmWorkerRecord)

The FrmBill does not follow the **Liskov Substitution Principle** because it does not represent a window or public methods into the program. There are two fields called "Other" and in one of them it is not clear which is the information that you have to write. The field discount and TOTAL are not clear. They must be calculated into the program.

In the FrmMotorcycle there are some buttons without names so it is difficult to understand how the program works. **Unclean code.**

Each class should be responsible for only one part of the system's functionality. We can see there are many classes that allow the connection to the database, so it is not clear which class do a specific job. So in this part of the program does not follow the **Single Responsibility Principle**.
